BucketList Project

1. **Instruction**

   1) Sign Up if you do not have an Account. Your password must contain letters and numbers else it wont sign up
   2) After Signing in or Signing up you will be redirected to the List Page where there is a button down right to add in your bucketList.
   3) If you press the + button down right,after writing your description, choosing your date, map and title. After pressing save it will redirect in your list with the following bucketlist.
   4) There will be a checkbox next to your list in case if your done with. It will sort from early to latest date.
   5) In case if you want to edit your items list please click on it and it will be redirected to the same page as the add button.
   6) In the toolbar there is a logout.

2. **Learn**

   This project was a huge learning curve. The 1st objective that I learned is using Google Map android, it forced me to google, research and watch youtube videos about on how to implement it inside my application. The 2nd objective and the most important is the authentication between the user and firebase. Authentication at first was hard but doing it in class then try again to implement it on my own is where I struggled the most but however I gained some knowledge. Lastly everything was a good experience, especially

that the project cover everything that we did on top of that it forced me to research more therefore I gained some knowledge on my own.
